

Desk Phones

Phones Designed Exclusively for IC-talk HCC

Designed to work with IC-talk HCC, the phones work natively out of the box with the system reducing complexities and delays on roll out and changes. Each phone in the series is powered by Power over Ethernet and features; speakerphones, dual Ethernet Ports, multi-way conference calling and high definition voice quality.

Full Integration with IC-talk HCC

Through phone apps installed on the phone, users can control complicated system features in the cloud directly from their phones. User applications include:

- Call Parking
- Do Not Disturb
- Time Conditions
- Presence
- Transfer to Voicemail
- Visual Voicemail
- Call Flow
- Follow Me
- Conference Rooms
- Call Forwarding
- Queues
- Queue Agents
- Log in / Log out
- Contacts

Zero Touch Provisioning & System Control

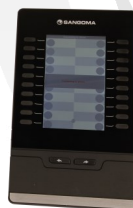

VoIP can be complex to install, requiring configuration of many different parameters, and hundreds of extensions taking hours. When purchased the phones will look to your cloud controller for setup, download firmware, and prompt the user for their extension number and PIN code sent in a prior email. Once connected, management of the phones is directly via the system either individually or as a group.
